Companies we represent:

RCIS- Farmers Mutual Hail- Diversified Crop Insurance- Hudson

Crop Insurance Solutions

Use your **Precision Farming** data to provide the required crop and claims reporting information.

Benefits of using Precision along with your crop insurance:

- Reduced Premium by only insuring the acres where the seeder/planter went. Not the FSA acres.
- Free to use-You already have the GPS data in your compatible farm equipment.
- Get paid faster. Claims for Prevent Plant and production losses can be processed quickly.
- Have a running history in the program to look back at acres, yield, and any work done in the field.
- With Precision RMA reviews only need to go back to previous year, instead of 3 years.
- Grain from the year before can be comingled as you have the precision production data for the year.
- APH Yield increases as you more accurately report insured acres. See example to the right.
- Simplifies reporting acres for both Crop Insurance and at FSA.

See how you can use Precision to increase your APH

Corn		
	FSA Acres	Precision Acres
Acres	80	78
Production	14400	14400
Yield	180	184.62

Soybeans		
	FSA Acres	Precision Acres
Acres	72.87	71.15
Production	4718	4718
Yield	64.7	66.30

We will be here to support you throughout the whole process. Josh has background with many technologies, having worked in network technology for over 17 years, prior to becoming an agent.

Once Planting & Production data is transferred to us, we take care of getting it together. You just need to verify your numbers when we are done!

Precision can be used for Acreage Reporting, Production Reporting, or both. If you chose not to use for production reporting that is not a problem.

Precision is found to be beneficial even when just used to report planted and PP acres.
